

## **The Many Applications of Compressed Air**

Cleveland, Ohio – November 15, 2012 – The power of compressed air is used in thousands of applications and is vital to the productivity of industries around the globe. There are many different types of compressors and pneumatic tools, and their applications are numerous. Compressed air provides power for a multitude of manufacturing operations and industries such as:

- Industrial Plant Maintenance
- Pharmaceutical Manufacturing
- Power Generation
- Electronics
- Agriculture
- Food & Beverage

For more information on the many uses of compressed air, visit CAGI web site at Working with Compressed Air, Applications <http://www.cagi.org/working-with-compressed-air/applications.aspx>. In addition, Chapter 1 of the *Compressed Air and Gas Handbook* has over 80 pages on the various uses of compressed air. Visit the CAGI website [www.cagi.org](http://www.cagi.org) to order the Handbook.

The Compressed Air and Gas Institute is the united voice of the compressed air industry, serving as the unbiased authority on technical, educational, promotional, and other matters that affect the compressed air and gas equipment suppliers and their customers. CAGI educational resources include e-learning coursework on the *SmartSite*, selection guides, videos and the *Compressed Air & Gas Handbook*. For more information, visit the CAGI web site at [www.cagi.org](http://www.cagi.org).
